Q.1 Apply the concept of workplace behaviour to a workplace situation covering its scope & importance

⇒

- Workplace Behaviour (WB) means studying how people act at work, alone and in groups, and using that understanding to help them do better work

- Situation :—
- A new project team in a software company keeps missing deadlines. The manager does not just say "they have bad attitude" He looks for the real reasons at three levels

- Scope :—
  - Individual level : one person's nature, thinking, feelings and motivation. example: One member is not confident with a new tool.

  - Group level :- ~~one person's n~~. how people work together. roles, communication, ~~relation~~ leadership, conflict. Example :- nobody knows who does what, and meetings are irregular

  - Organization level :- company rules, structure and culture. Example: priorities keep changing.

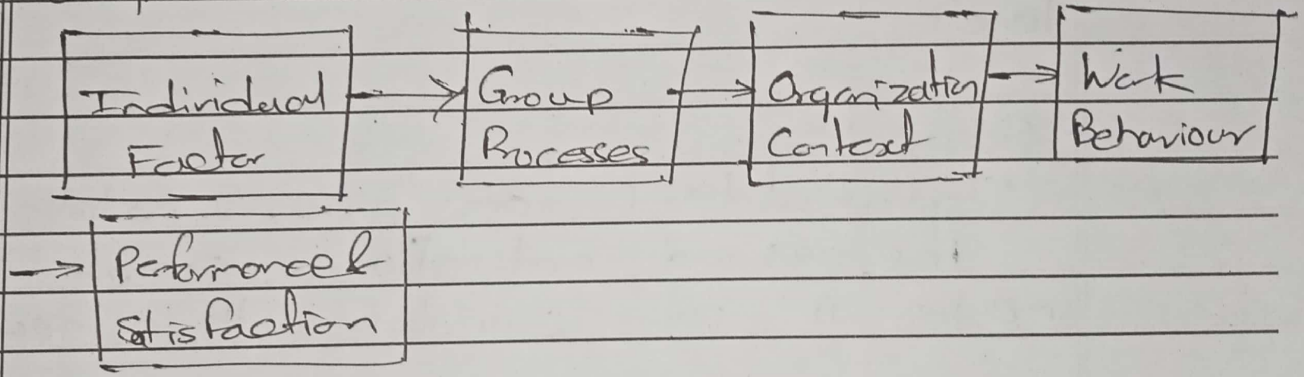

- Action taken :- The manager gives tool training (individual), fixes roles and a weekly meeting (group), and asks top management to

Date :

keep priorities steady (Organization)

- Importance :—
  - It helps us understand why people behave in a certain way.
  - It improves performance, satisfaction and teamwork
  - It reduces conflict and employee leaving the job.
  - It helps manager decide using facts, not guesses.

- Diagram :—

- Conclusion :— Work get done through people. If manager understand people, they can solve problems properly get better results.

Date :

Q.2 Apply the theoretical framework of Workplace Behaviour to a situation involving individual and group behaviour

→

- Behaviour at work depends on three connected levels: the individual, the group and the organization. Together they decide how well people perform and how satisfied they feel.

- Situation:- In a design department, one employee is quite and withdrawn and the whole team does not co-ordinate well with the testing team.

- Individual Behaviour :-
  - Perception (how he sees things): he feels his ideas are ignored.
  - Attitude (his feelings about work): low satisfaction, so less effort.
  - Individual differences: his need for recognition is different from others.

- Group behaviour (about the team):-
  - Roles are not clear, so work is repeated or missed.
  - Norms (unwritten team rules) discourage speaking up.
  - Communication with other team is poor. so delays happens

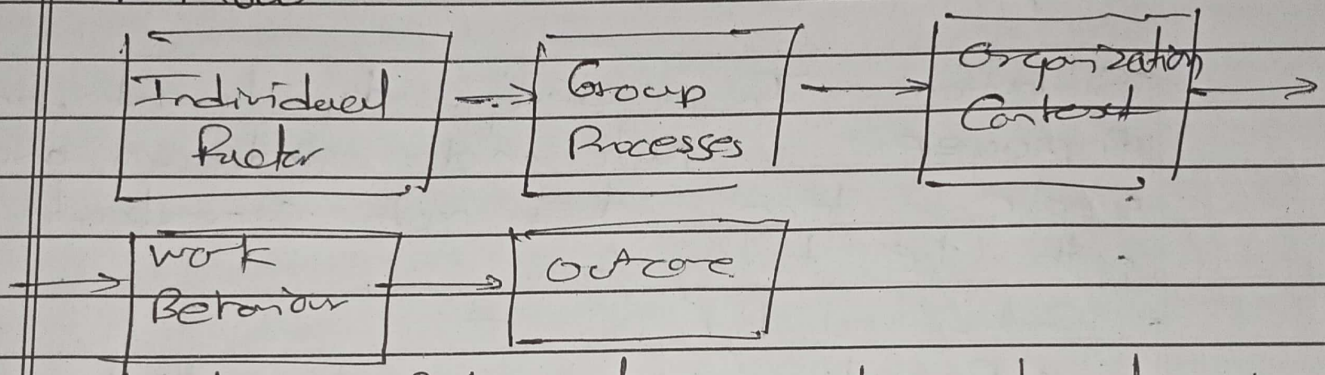

- Organization effect :-

Frequent dedline changes and no prom feedback system add pressure.

Date : _____

- Action :-
Theorage first collects facts by talking and observing. Then she gives feebaek and recognition, clears the roles, sets meeting rules that welcome everyone's opinion, and reports the deadline issue to higher department

- Flow :-

- Results :- Participation and coordination improves so individual and group behaviours are linked, and a manger should find the cause first and then act.

Date :

Q.3 Apply the SOBC model to a suitable workplace situation covering all four components.

⇒

- SOBC explains what happens after something occurs at work something happens (S), the person thinks about their own way (O), they act (B), and the result of that action (C) decides whether they repeate it
- Situation :- An IT Company announces a bonus and public appreciation for teams that solve urgent customer problems on time.
- The four parts :-
  - Stimulus (S) :- the event or trigger. Here, the bonus and appreciation announcement.
  - Organism (O) :- the employee's inner side: how they understand it, their feelings, expectations and past experience. One developer thinks the target is fair and feels motivated. another thinks it is pressure and feels worried.
  - Behaviour (B) :- what the person actually does. The motivated developer talks early with the testing team and finishes the fix on time.
  - Consequence (C) :- what follows the action. The manager praises the team, the customer is happy and the bonus is paid
- Why it matters :- Because the result is good, the employee will likely repeat the same behaviour. if good work was ignored, the habit would fade.
- Managers use : Explain rules clearly, check how employees understand them, and give rewards that encourage the right behaviour.
- Conclusion :- SOBC helps managers understand and guide behaviour step by step.

~~Poor communication in a company, departments~~ work separately, deadlines are missed and employees show less interest.

Date :

Q.4 Apply any two models of workplace Behaviour to a suitable managerial situation

=>

- Models are different styles of managers, based on what manager believes about employee. The four are autocratic, custodial, supportive & collegial. Here I use two: Autocratic & supportive
- Situation:- In a factor, the production line stops suddenly. The manager must resolve it fast and later prevent it from happening again.

1. Autocratic model (manager gives orders)
- Idea :- the manager has the power & employees follow instructions
- Use :- during the breakdown, the manager clearly tells each person what to do because time is short.
- Result :- quick action and control. But if used all of time, employees become dependent and less involved.

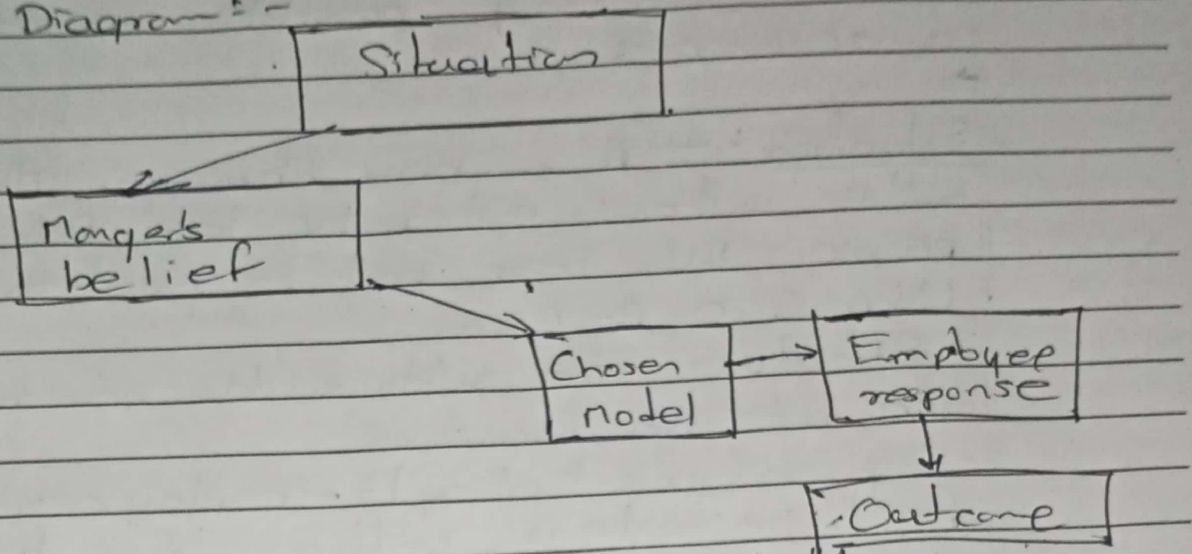

2. Supportive model (manager helps and encourages)
- Idea :- the manager's job is to help employees do their best.
- Use :- after the repair, the manager listens to the engineers, thanks them and asks for ideas to avoid the problem.
- Result : employees feel motivated and take responsibility.

- Judgement :- The manager checks how urgent the work is & how skilled the

Date :

for B. Emergences need decisions, improved needs support

- Diagram :-

- Conclusion :- No model is best everywhere. A good manager changes style as the situation changes.

WB covers:

human behaviour

Date :

Q.5 A team shows low participation after a change in work rules. Apply the SOBC model considering possible causes and consequences.

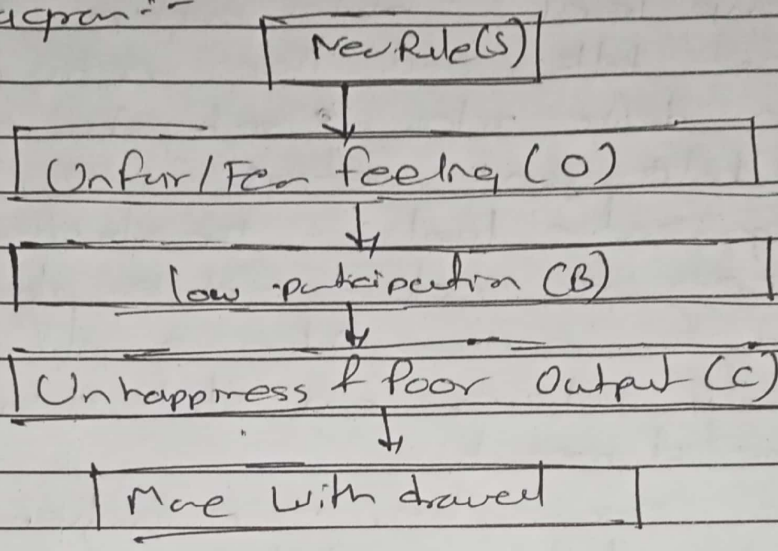

⇒

- Situation :— A company changes its reporting rules without asking the team. After that, people take less part in meetings and tasks.
- Using S-O-B-C :—
  - Stimulus : The ~~subbe~~ sudden new reporting rule with no discussion.
  - Organism (inner thinking) :- employees may feel the rule is unfair, may think management does not trust them, may be afraid of making mistakes, or may simply be confused about what is expected.
  - Behaviour :- low participation, silence in meetings, minimum effort, late reports, maybe more absence.
  - Consequence :- work quality and coordination fall, and employees become more unhappy. If the manager only scolds them, the withdrawl ~~spot~~ grows.
- Possible causes : no consultation, unclear reason for the change, fear of failure, extra work, loss of freedom.
- Solution :—
  1. Talk to employees to know how they see the rule.
  2. Explain why the rule is needed and

Date :

output is expected
3- Change the rule if their feedback is reasonable
4 Appreciate good participation so it continues.

- Diagram :-

- Conclusion :- fixing the trigger and understanding employee's feelings works better than blaming them.

Q.6 Apply the scope of Workplace Behaviour to an organization facing poor co-ordination and declining employee involvement.

=>

- Scope means the areas WB covers: individual behaviour, group behaviour, organization - level factors, and the results such as performance and satisfaction.
- Situation :- In a medium sized company, departments work separately, deadlines are missed and employees show less interest.

Scanned with OKEN Scanner

Date : _____

- Analysis and action :-
  - Individual level : employees feel their work is not noticed, so they lose motivation. Action : give regular feedback and recognition ; give work that suits their skills.
  - Group level :- roles overlap, departments do not talk, and there is no common goal. Action : define roles, set shared targets and hold joint meetings.
  - Organization level :- the structure is to rigid policies are unclear, and employees are not asked for opinions. Action : simplify reporting, clearify policies and start a suggestion system.
- Expected results :-
better coordination, more involvement, less absence, better quality.
- Diagram :- Individual factors → Group Processes → Organization Context → Work Behaviour → Better Co-ordination & involvement.

- Managerial point :- A problem that look personal may come from the team or the organization, so the manager should find the real cause first.
- Conclusion :-
WB's wide scope helps managers see the whole picture and improve both behaviour and results.

Date :

Q.7 Apply the concept of Workplace Behaviour to a situation involving employees, managers and the organization:

⇒

- WB looks at how employees behave, how mangers act and what kind of environment the organization given, and how these affect each other and the results.
- Situation :-

In a service company, customer complaints are increasing and employees say that management does not listen to them

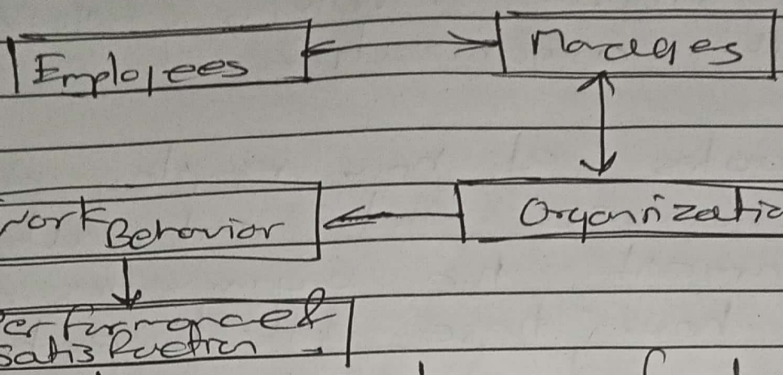

- Role of each :-
  - Employees :- their attitude, skills and motivation decide service quality Here they are tired of heavy workload and lack of feedback
  - Managers :- they guide, communicate and appreciate Here, the manager only gives orders and rarely listens.
  - Organization :- its rules, cultures and systems Here, targets are too high and the software is outdated

- Action :-

Employees get training and feedback. The manager holds regular discussions and listens. The organization makes targets realistic and upgrades its tools

Date :

- Diagram :-

- Results :- Employees feels bad, complaints reduce and customers become happier.
- Conclusion :- Behavior at work is is not caused by employees alone. Good results need all three to work together, and managers should find causes before deciding.

Q.8 Apply the major models of Workplace Behavior to a situation involving different assumptions about employees

⇒

- A model is management style. Each style rests on a belief about employees. The four are autocratic, custodial, supportive & collegial.

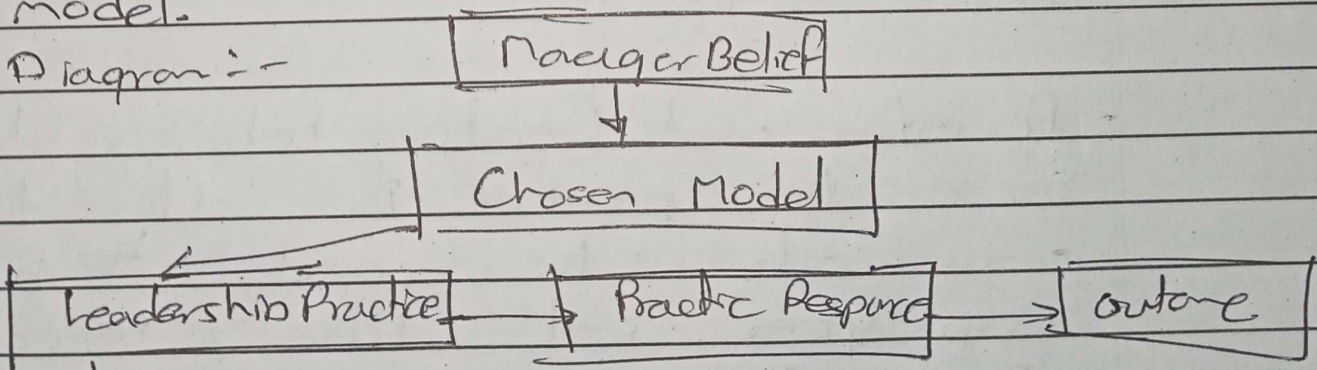

Situation :- A technology company has a factory, a payroll department and a software team. the manager must manage each one suitably.

- The four models :-

- Autocratic (power) :- belief : employees need

Date :

orders. used for strict safety rules in the factory.
Drawback: employees reamain detached and show little initiative.
• Custodial (money and security):- belief: employees want security. used through salary, insurance and benefits. Drawback: people feel safe but not very motivated.
• Supportive (leadership):- belief :- employees want to grow and be appreciated. Used when team leaders coach and praise. Result: motivation and involvement.
• Collegial (partnership):- employees are responsible and self-displined. used when the software tam plans and reviews works together. Result: teamwork and ownership.
- Judgement: No model is best everytime. The manager looks at urgency skill level and how much teamwork is needed. One company can use more than one model.
- Diagram:-

- Conclusion:-
Models are tools for choosing right working climate for each situation

Date :

Q.9 A manager introduces recognition for timely project completion. Apply S-O-B-C model.

⇒ Situation :- An IT project manager announces that teams finishing milestones on time will be praised publicly in the monthly meeting.

- Using S-O-B-C;
- Stimuli (S) : The new recognition scheme for finishing on time.
- Organism (O) : how employees take it. Those who value recognition and find the targets fair feel encouraged. Others who think the rules are unclear or biased may not care.
- Behavior (B) :- motivated team plans better, co-ordination with other teams. solve problem quickly and finish milestones on time.
- Consequence (C) :- public praise, positive feedback and a good name for the team. Quality and client satisfaction also improve.

- Reinforcement (Making behaviour stronger) :- Since the praise is valued and comes after the good behaviour, employees will likely repeat it. If praise came late or unfairly, the effect would be weak.
- Manager should :-

1. Keep the rules clear and fair
2. Give recognition soon after the work

Date :

3. Ask for feedback to know how employees feel.
↳ Make sure ~~el~~ statements are not rewarded by mistake.

- Diagram :- Recognition Scheme → Employee's Thinking → Timely completion → Praise → Repeated Behaviour
- Conclusion :- A few triggers, a positive understanding and a valued result together build lasting good behaviour.

Q.10 Apply Workplace Behaviour concepts to improve teamwork in a newly formed project group.

→ A new project group misses deadlines because members do not know their duties, talk irregularly and do not get know each other well.

- Concepts used
- Roles :- write down each person's duties so work is not repeated or missed.
- Norms :- agree on simple team rules such as meeting times and how fast to reply to messages
- Communication :- hold a short daily or weekly meeting and use a communal group for updates.
- Cooperation and trust :- give shared goals and tasks that depend on each other and organize small team activities so members rely on one another.

Date : _____

- leadership :- The leader guides, solves small conflicts early and appreciates the whole team.
- Individual need :- give training to those unsure about a tool and motivate tasks
- Expected results :- clear roles improve communication; good communication builds co-operation, co-operation improves team performance.
- Diagram :- Team situation → Roles & Means → Communication → Cooperation → Team performance
- e.g. After a kick-off meeting that fixes duties and a weekly review, the group starts meeting its milestones.
- Conclusion :- Teamwork doesn't happen by itself. A manager who defines roles, set rules and encourages talking turns a group of individuals in a real team.

WORKPLACE BEHAVIOUR

Date :

Assignment - Unit 2

Q1] Apply the major factors affecting the personality to the workplace situation involving employee behaviour.

-> Personality refers to relatively enduring patterns in the way a person thinks, feels and behave. In organized behaviour personality is commonly understood on basis of heredity, environment and situation.

key application / explation :

- Heredity: Biological and inherited tendencies provide part of the foundation for individual differences.
- Environment: Family, culture, education and social learning influence attitude, habits and behaviour.
- Situation: The immediate context can strengthen suppress or alter the expression of traits.
- Interaction: Observed behaviour usually reflects the interaction of personal tendencies and current environment.

Application to given workplace situation :

Managerial application : Manager should avoid stereotyping. They can use personality knowledge to improve role fit, communication, coaching and team composition while still evaluating actual behaviour and performance.

Real life example: Two technically strong employees receive the same client presentation task. one readily speaks to client, while other prefer detailed presentation and written communication. Their different tendencies reflect the personality

Date :

past experience and confidence. Under good leader the quiter employee may perform good. showing importance to situation.

Q2] Apply classical conditioning, operant conditioning and social conditioning principle to suitable workplace behaviour.

-> learning is a relatively lasting change in behaviour or behavioural potential arrising from experience. In workplace, classical conditioning, operant conditioning and social learning helps employee how to aquire and maintain personality, behaviour.

Key explanation / application:

- Classical conditioning: learning through association between stimuli. A previously neutral signal become associated with meaningful response.
- Operant conditioning: Behaviour is shaped by its consequences. Behaviour is followed by consequence.
- Positive Reenforcement: A valued consequence is added after desired behaviour, such as praise or recognition.
- Negative reinforcement: An unpleasant condition is removed after desired behaviour, such as reducing close monitoring after reliable performance.
- Social learning: People learn by observing credible models, remembering what they observe, reproducing the behaviour and seeing the consequence.

Scanned with OKEN Scanner

Date :

Application to the given workplace situation:
Managerial application: Specify the desired behaviour clearly, provide a credible model where useful, give timely feedback, and make the consequences fair and connected to behaviour. Reinforcement should not be final result for overall growth.
Real life example: A customer-service manager introduces a new complaint handling method. An experienced executive demonstrates the method while new staff observe (classical and social). Employees practices and receive immediate praise for correct use (positive). After consistent performance, intensive supervision is reduced (negative).

Q3] Apply reinforcement principles to a workplace situation involving positive and negative reinforcement.

→ Learning is a relatively lasting change in behaviour or behavioral potential arising from experience. In workplace, classical, operant conditioning and social learning helps employee how to acquire and maintain personality, behaviour
key explanation / application:
- Positive Reinforcement: A valued consequence is added after desired behaviour, such as praise or recognition.
- Negative Reinforcement: An unpleasant condition is removed after desired behaviour such as

Scanned with OKEN Scanner

Date :

reducing close monitoring after reliable performance.

9] Apply the MBTI and Big Five personality models to a workplace situation.

-) Personality framework can help managers discuss individual differences, but they should support rather replace direct evidence about performance. Two well known approaches are the Mayers-Briggs Type indicator (MBTI) and Big Five model.
key explanation / application:
- MBTI: uses preference pair such as Extraversion - Introversion, sensing - Intuition, Thinking - Feeling and Judging - Perceiving to describe preferred way of interacting.
- openness: Associated with curiosity and assertiveness, may support interaction-heavy roles, through introverted employees can also lead.
- conscientiousness: Associated with dependability planning, persistence; often relevant to reliable task completion
- Extraversion: Associated with sociability and assertiveness; may support interaction-heavy roles, through introverted employees can also lead effectively.
- Agreeableness: Associated with cooperation, trust and concern for others; using collaborative settings.
- Emotional stability: Associated with calmness

Date : _____

and resilience under pressure; the opposite pole is often neuroticism.
Application to the given workplace situation:
Managerial Application: Use personality framework for self awareness, communication and team discussion, not as deterministic selection tools. A balanced team may benefit from complementary tendencies, but job requirements, competence must also be considered.
Real-life example: while forming a product-development team, a manager may value conscientious members for planning and follow-through, open members for idea generation, agreeable members for cooperation and emotionally stable members for handling pressure.

qs] A manager's decision about an employee is influenced by a recent incident. Apply concepts of perception to this situation.

-> Perception is the process through which people select, organize and interpret information to make sence of their environment. Because manager may make judgement with incomplete info, error can influence appraisal and decesions
Key explanation / applications:
- Recency effect: Recent events receive disproportionate weight compared to performance across full period.
- Halo / horns effect: one strong positive or

Date :

negative characteristic influences the overall judgement of person

- selective perception: The evaluator notices information that fits existing expectation and overlooks inconsistent evidence.
- Stereotyping: Judgement is influenced by assumptions about a group rather than evidence about the individual.
- Projection: A manager may assume others share their own characteristics or compare employee with other person.

Application to the given workplace situation:
Managerial application: use documented evidence across the full review period, multiple performance indicators, behavirial specific criteria and where feasible more than one source of information.

Real life example: An employee has performed consistently well for eleven years but makes one visible mistake just before appraisal. If the supevisor gives a poor rating mainly because of that incident, the recency effect is operating. If the supervisor then interprets all of the employee's work negetively because of the mistake, a horns effect may also occur

Q6] Apply the concept of heredity, environment and situation to personality differences among employes.

Date :

-> Personality refers to relatively enduring patterns in the way a person thinks, feels and behave. key explanation and application:

- Heredity : Biological and inherited tendencies provide part of the foundation.
- Environment: Family, culture, education, social experience influence habits and behaviour.
- Situation: The immediate context can strengthen, suppress or alter the expresion of traits
- Interaction : observed behaviour usually reflects the interaction of personal tendencies.

Q10] A supervisor rates an employ poorly because of on recent mistake. Apply perceptual-error concepts.

-> Perception is the process through which people select, organize and interpret information to make sence of their environment.

Real life example: An employee has performed consistently well for eleven months but makes one visible mistake just before appraisal. If the supervisor gives a poor overall rating mainly because of that incident, the recency effect is operating. If the supervisor then interprets all of the employee's work negatively because of the mistake, a horns effects may also occur

Date :

Q13] Apply perception concept to improve fairness in performance appraisal.

-> Perception is the process through which people select, organize and interpret information to make sense of their environment.
Real life example: An employee has performed consistently well for eleven months but makes one visible mistake just before appraisal. If the supervisor then interprets all of the employee's work negatively because of that incident, the recency effect is operating.

Q14] Apply the big five model to form a balanced project team.

-> Personality frameworks can help managers discuss individual differences, but they should support rather than replace direct evidence.
Real life example: while forming a product development team, a manager may value conscientious members for planning and follow-through; open members for idea generation, aggreable members for cooperation and emotionally stable members for handling pressure.

Scanned with OKEN Scanner

Date :

Apply social learning principles to train new employees.

Learning is a relatively lasting change in behaviour or behavioural potential arising from experience.
Real life example: A customer-service manager introduces a new complaint-handling method. An experienced executive demonstrates the method while new staff observe. Employee practise the method and receive immediate praise for correct use.
